

ARE YOU AN INNOVATOR? – OH YES, WE ARE!

Schnellecke wins the SAP Innovation Award in the Process Innovator category.

Under the heading “Using the power of digitization for just-in-sequence logistics”, Karsten Keil, Vice President for IT, presents the use of an **IoT pilot project** for sensor-controlled monitoring of JIS traffic in real time.

In specific terms, this means that Schnellecke supplies automotive parts synchronously with its customers' production processes. Until recently, there was no detailed insight into the cross-company JIS delivery process, meaning that everyday business questions about quantities, processes, and costs could not be answered. The sensor-controlled monitoring now makes it possible to use an operative dashboard to gain a detailed real-time insight into the routing and use of shipments. This makes the flow of goods transparent for all parties involved – both for Schnellecke and for customers, increases operational efficiency, and provides customers with a new level of service quality.

The use of SAP to optimize our processes convinced the SAP Innovation Committee, which selected Schnellecke as the winner out of 81 finalists in the Process Innovator category.

SAP Innovation Awards 2019

The SAP Innovation Awards team recognizes

**Unleashing the Power of Digitization for
Just-in-Sequence Logistics**

as the 2019 winner in the **Process Innovator** category.

Schnellecke Group AG & Co. KG demonstrated the use of technology to drive business transformation by using SAP products and technologies to change their business in dramatic ways.
